DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

Paragraph 7, line 5, the examiner is not sure what is meant by "100 mesh".

Appropriate correction is required.

Claim Objections

Claim 8 is objected to because of the following informalities:

Claim 8, line 2, the limitation, "100 mesh" is confusing. The examiner is not sure what is meant by "mesh."

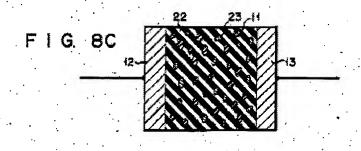

Appropriate correction is required.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Akiyama et al. (US 4,593,332).

Akiyama et al. disclose in fig. 8C, a capacitor comprising a mixture of electrically conductive particles (23) and non-conductive particles (11 – col. 7 lines 29-35), the mixture being spaced between two parallel plates (12, 13) to which leads are attached; wherein the electrical conductive particles comprise a magnetic material that renders them responsive to the application of a magnetic field (*as suggested in col. col. 7 lines 50-56).

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 9-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Akiyama et al. (US 4,593,332).

Regarding claim 9, Akiyama et al. disclose the claimed invention except for the conductive and nonconductive particles are spherical in shape. It would have been an obvious matter of design choice to form the conductive/nonconductive particles with a spherical shape, since such a modification would have involved a mere change in the shape of a component, a change of shape is generally recognized as being within the level of ordinary skill in the art. *Span-Deck Inc. V. FabCon, Inc., 215 USPQ 835.*

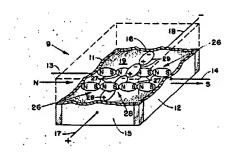

Regarding claim 10, Akiyama et al. disclose the claimed invention except for the conductive and nonconductive particles are spheroidal in shape. It would have been an obvious matter of design choice to form the conductive/nonconductive particles with a

Application/Control Number: 10/691,236

Art Unit: 2831

spheroidal shape, since such a modification would have involved a mere change in the shape of a component, a change of shape is generally recognized as being within the level of ordinary skill in the art. Span-Deck Inc. V. FabCon, Inc., 215 USPQ 835.

3. Claims 1-3, 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hrach et al. (US 3,535,602) in view of Walpita et al. (US 5,739,193).

Hrach et al. disclose in fig. 2, a mixture of electrically conductive particles and a dielectric material, the mixture being spaced between two parallel plates (11, 12) to which leads are attached; wherein the electrical conductive particles comprise a magnetic material that renders them responsive to the application of a magnetic field.

Hrach et al. disclose the claimed invention except for the mixture comprises nonconductive particles.

Walpita et al. teach the use of a dielectric material comprising barium titanate filler (powder) (see examples and col. 4 lines 30-41).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the capacitor of Hrach et al. by using a dielectric material as taught by Walpita et al., since such a modification would provide the capacitor with a dielectric material having a high dielectric constant (improved capacitance).

Application/Control Number: 10/691,236

Art Unit: 2831

Regarding claim 2, Hrach et al. disclose the dielectric has been exposed to a magnetic field to orientate the electrically conductive particles (col. 2 lines 30-70).

Regarding claim 3, Hrach et al. disclose the conductive particles (magnetic material) are iron (col. 3 lines 45-50).

Regarding claim 6, Walpita et al. teach that the non-conductive particles are a ceramic.

Regarding claim 7, Walpita et al. teach that the non-conductive particles are barium titanate.

Regarding claim 8, Hrach et al. disclose the conductive particles are 1 micron in size (col. 3 lines 30-45) and Walpita et al. teach that the non-conductive particles are 1 micron in size (see examples).

4. Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hrach et al. (US 3,535,602) and Walpita et al. (US 5,739,193) as applied to claim1 above, and further in view of Hertz (US 3,988,651).

Hrach et al. disclose the claimed invention except for the electrically conductive particles are plated.

Hertz et al. teach that it is common in the capacitor art to plate conductive particles using a noble metal.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the capacitor of Hrach et al. by applying a noble metal to the base metal (iron) conductive particles as taught by Hertz et al., since such a modification would improve the electrical conductivity of the iron filaments.

Art Unit: 2831

Regarding claim 5, Hertz et al. teach that the metal is platinum.

Conclusion

In order to ensure full consideration of any amendments, affidavits, or declaration, or other documents as evidence of patentability, such documents must be submitted in response to this Office action. Submissions after the next Office action, which is intended to be a final action, will be governed by the requirements of 37 CFR 1.116 which will be strictly enforced.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

2003/0178221 – teaches an increased conductivity by applying a Pt coating over Fe particles.

4,953,273 – teaches the use of a ceramic/conductive particle layer sandwiched between two metallic layers.

4,876,140 – discloses a plastic layer comprising magnetic powder.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric W Thomas whose telephone number is (571) 272-1985. The examiner can normally be reached on M, T, Sa 9:00AM - 9:30PM; W, Th, F 5:30PM-10:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dean Reichard can be reached on (571) 272-1984. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
